

As soon as I got inside I immediately went over to the worm-hole and started clambering through it.

We visited the National Space Centre on a coach on Tuesday last week and it took about an hour.

we finally got there but it was freezing cold! It looked like a rocket!

We also went to the planet section and we looked at all the planets.

Mercury, Venus, Earth, Mars, Jupiter, Saturn, Uranus, Neptune, Pluto

We all went to the planetarium. We saw the different constellations in the night sky. CONSTELLATIONS: Cassiopeia, the plough, Hercules, the great bear.

The best part was when we entered the shuttle. When we got in the people in the control room told us that we needed to do this and that and we were all freaking out because it wasn't working, but finally we got it to work and it was really awesome because it started to rumble and gas leaked into the shuttle so we all had to jump out and save our lives before we died.
